PHP
MERN
Magento2
Symfony
Codeigniter
React.Js
Vue.Js
Stimulus.Js
HTML5 / CSS3 / BootStrap
JavaScript
RestAPI
Jenkins
Circle CI

Cloud Platforms and Devops:
Amazon Web Services(AWS)
Heroku
Docker
Ngnix
AWS
Redis

Databases:
PostgreSQL
MySql
SQL
MongoDB
MariaDB,

Project Management Tools:
Jira
Trello

PROJECTS

Find Kid School
Laravel, AWS
- Web application that manages different schools in all of the provinces in Japan. The Admin side was to manage the overall school listings. 3rd party APIs were used such as google maps for geolocation
- This project scope aimed to streamline operations regarding to school enrollment and administrative roles to make decisions for the applications across different prefectures of Japan
- website:
  https://findkidschool.com

Uniqkidz
Ruby on Rails, Flutter, AWS
- Mobile application for book caregivers to manage various aspects of childcare by appointment scheduling, activity planning and meal tracking on the basis of caregiver available appointment slots. It simplifies childcare management and enhances collaboration between caregivers and parents.
- As part of this project, my role involved overseeing backend API development, ensuring seamless data exchange between mobile app and web-based admin side to facilitate efficient communication, data synchronization and secure storage of child, parents and caregivers information.

CoFi
Ruby on Rails, Stimulus JS, AWS
- Powered by the robust Ruby on Rails and enriched with the interactivity of Stimulus.js. A solution to medical invoicing to combine the invoices CoFi seamlessly integrates BlueSnap Payment Gateway, Alphaeon and CareCredit Financing Insurance.
- Redefine the way eye care invoices are processed, combine the invoices for the patient that are payable to Opthamologists, Optometrists and service providers, with precision and efficiency at the forefront.
- Webhooks are used to manage the third-party integrations.
- My role was to develop the features and to ensure the deliverables that were planned in the sprints and managing some of DevOps.
- website:
  https://www.cofimd.com/

ConnEvents
Laravel, React Js, AWS
- Event management web application that manages all the added events tickets purchase management and check-ins. Available on different subscriptions to multiple event vendors. My role was to manage the backend API's of this product and front-end user interface.
- This application aimed to streamline event planning, ticket sales and attendee management while offering various subscription tiers and live streaming experiences with RTC.

Github

EDUCATION

Bahauddin Zakariya University
Bachelor of Info. Technology
Major in Development
2017— 2021

Punjab College
FSC (Pre engg)
Major in Chemistry
2015— 2017

Build4Life

Ruby on Rails, React Js, AWS
- Web application used for workout management and daily calories track for gym members, Their fee management and workout tutorials.
- My role was to manage the backend API's of this product using RoR and frontend using React.js..
- This product scope is aimed to simplify fitness routines and users to achieve their health goals. The admin panel allows gym staff to manage member accounts, track progress, analyze data efficiently and fee management for gym subscriptions.

City Courier

Laravel, Vue, AWS
- Web-based product for a courier services startup for courier delivery overall management through all the cities.
- The scope included designing and implementing a real-time tracking system, user authentication, secure data management, admin dashboard and seamless integration of frontend and backend technologies.
- Robust payment integrations to pay the courier services seamlessly

Knaw News

Laravel, Flutter, Azure
- A dynamic news portal app, offering personalized news and easy access to various news sources across region wise. Offline reading, bookmarking, seamless content sharing, and real-time updates and push notifications. Leveraged mobile app versatility and robust backend capabilities.
- My role involved development of efficient backend API's that communicate between mobile application and third party API requests to serve the latest news updates across different regions.

AsiaCell

Magento2, Knockout JS, Azure
- Mobile ecommerce platform built in Magento2 and Knockout JS to provide a robust solution for selling and purchasing mobile devices and Sim cards in the region of Iraq.
- Integration of extensions such as Magedelight extension to enhance the functionality for various nearby stores for store pickup.
- Third party API integrations for locking and swapping the sim number for the particular user during the checkout when being purchased.
